

Thursday 3rd December

Starter: Label the light source and the shadow.

What is a shadow?

A shadow is a object, person or a building. Shadows are created by light and it being blocked. They are made by an object if there was a torch and ur hand went in front of it it would create a shadow. A torch is not the only light source that can create a shadow the others are sun, Lamp, car lights, street Lamp or sometime the moon but theres still more.

Think carefully about the size of the shadow. We will revisit this in the next lesson.
